# U. S. AIR FORCE TECHNICAL INFORMATION SHEET

This questionnaire has been prepared so that you can give the U. S. Air Force as much information as possible concerning the unidentified aerial phenomenon that you have observed. Please try to answer as many questions as you possibly can. The information that you give will be used for research purposes, and will be regarded as confidential material. Your name will not be used in connection with any statements, conclusions, or publications without your permission. We request this personal information so that, if it is deemed necessary, we may contact you for further details.

1. When did you see the object?  what day? October 157  Day Month Year	2. Time of day: 1800 Hour Minutes  (Circle One): A.M. or P.M.
3. Time zone:  (Circle One): a. Eastern b. Central c. Mountain d. Pacific e. Other	(Circle One): a. Daylight Saving b. Standard
4. Where were you when you saw the object?	
8705 No MAIN Necrest Postal Address	DAYTON . O.
	City or Town State or Country
Additional remarks:	****
5. Estimate how long you saw the object Hour  5.1 Circle one of the following to indicate how	
Certain  B. Fairly certain	c. Not very sure d. Just a guess
6. What was the condition of the sky?	
(Circle One): a. Bright daylight	d. Just a trace of daylight
b. Dull daylight	e. No trace of daylight
c.) Bright twilight	f. Don't remember
7. IF you saw the object during DAYLIGHT, TWILI the object?	GHT, or DAWN, where was the SUN located as you looked at
(Circle One): a. In front of you	d. To your left
b. In back of you	e. Overhead
c. To your right	f. Don't remember

# AIR INTELLIGENCE INFORMATION REPORT

62d Troop Carrier V:

## 1. Description:

- a. Shape: Circular Global
- b. Size: Very difficult to determine as distance was undetermines but it appeared larger than a large 120 foot balloon at 50 miles distance; however, it appeared to be a much greater distance away.
  - c. Color: Silver, changing to light blue, golden, pink, silver, pinkish red.
- latter part of the sighting.
  - e. Formation: Small object just to the west of larger.
- f. Features: Circular, global. Seemed to split and then reform, however this could have been an illusion as the object's distance was hard to determine.
  - g. Tail or exhaust: None
  - h. Sound: None noticed.
- i. Other features: Brighter at some times, very much brighter than any stars or other objects in the sky.
- 2. Description of courses Moved from position 200° from Larson AFS at 100 elevation above the horizon at 01102 to position 240° from Larson where it dropped below the horizon at 02502. It 40 MW

#### 3. Manner of Observations

- a. Object first called to my attention by Mr. to of Moses Lake, Washington by telephone at Olloz, 20 Oct 57 (Phone Manual). He stated, "A bright spot, silvery, circular in shape, like the sun, SSW of Moses Lake moving is westerly direction".
- b. I stepped on the roof of Base Operations and could spot it very easily with the naked eye, also studied the object with field glasses. I then went to the Centre Tower for a better look.
- c. It appeared circular in shape 40 to 50 thousand feat up and seemed to change shape slightly. It sort of split in half and then come together. I estimated it to be 150 to 200 miles from Larson, possible over Portland, Oregon. At this time I sould clearly see Mt. Rainier, Mt. Hood, and other mountain ranges against the light sky background. By 01452 it was a bit lower on the horison, had become brighter. Changed color from silver to light blue, from golden to pink, from pinkish red to silver. A small object, just a speck, appeared just to the west of the larger object and stayed along that side until the larger object disappeared under the horison at 02502. Just prior to its going below the horizon, it changed color from silver to blue, to pink, then a red ish orange, like the sun does prior to its setting below the horizon.
- 4. Time and date of observation: (20 Oct 57) 0110Z to 0250Z. 01/0-8=17/0 &cal
- 5. Jacation of observation: Larson AFB Operations and Control Tower, 47°12'N,

ASTRONOMY

# Comet's Head and Tail

A COMET confusing head and tail is now roaming nearby skies.

Dr. Elizabeth Roemer, astronomer of the U.S. Naval Observatory, Flagstaff, Ariz., reported that the coma (haze around the comet's center and part of its head), which generally blends into the tail of a comet, is almost on the opposite side of the tail in Encke's comet.

This comet, which reappears near the sun every three and a third years, was observed at Flagstaff until it went too low on the horizon to study in the Northern Hemisphere.

Dr. Roemer said the displacement of the coma in relation to the tail was "a very interesting feature" seldom seen in comets. She said it could possibly be that the coma and tail merely appear to be opposite because of the angle from which the comet is viewed from earth.

The comet's tail continued to get brighter and longer during the time it was observed.

When last photographed, the tail was more than two degrees long.

Although the comet is now very close to the sun, it will reappear in March for observation in the Northern Hemisphere.

A peculiarity of Encke's comet is its "on again-off again" acceleration. It has been observed to speed up for no accountable reason and no precise calculations of the acceleration have been made so far, Dr. Roemer said.

Dr. Fred L. Whipple, director of the Smithsonian Astrophysical Observatory, Cambridge, Mass., has proposed that the comet's acceleration is due to a jet stream shooting out from its rotating center.

Dr. Roemer said she did not know whether this jet is large enough to account for the comet's acceleration, or if acceleration exists at the present time. However, she expects more knowledge of the acceleration may result from data gather May.
